

Jump from a height – FreefallAirbag

Product description: A FreefallAirbag is used for fall impact reduction during height jumps. Designed for fearless adrenaline lovers willing to jump without a safety harness. The products can serve as an excellent event attraction, as well as in amusement parks. Appropriate air pressure is constantly maintained in an airbag, which guarantees safe but also exciting entertainment.

PRODUCT SPECIFICATIONS:

- The airbag provides an excellent and only option that ensures safety during jumps from a height without requiring any extra safety gear.
- Safety during landing is guaranteed by specially designed safety barriers, in which air pressure is maintained independently of airbag pressure. This way the jumper is protected against sliding off the airbag.
- The side and top sheets provide a perfect space for your own brand logo making your airbag your personal, giant billboard.
- Manufactured from high quality German materials to meet product expectations.
- It is certified and made in accordance with the PN-EN 14960 standard.
- FreefallAirbag is perfect for skiers and snowboarders who are willing to try height jumping, as well as anyone on a bicycle, scooter, or a motorcycle.
