

## Ski Resort AirBag - LandingAirbag

**Product description:** The LandingAirbag is a product designed for ski and snowboard jump training at any skill level, even Olympic one! Its size is adapted to various needs and skill capacity of users. Unlike classic solutions, its new style enables safe landing after performing a trick, but also finishing it and riding away in conditions similar to those of a classic slope.

### PRODUCT SPECIFICATIONS:

- Available in any size to ensure maximum comfort and safety during training.
- Prepared for connecting an internal watering system. Sprinklers are located inside a inflatable safety barrier, which guarantees maximum safety.
- A blower inflates all safety barriers separately, providing higher pressure than the airbag pressure. This prevents riders from sliding off a LandingAirbag.
- Top quality materials from leading European manufacturers. Top sheet contains KEVLAR, one of the strongest fibers, ensuring resistance to wear and tear, caused by the edges of skis and snowboards.
- Water inside the airbag is drained directly to the ground, preventing it from freezing and possible damage.
- Water resistant threads ensure durability and resistance of our product, regardless of weather conditions.
- Waterproof blowers function even in extreme weather conditions.
- Personal design of your whole park and dry slope material is also available!
- It is certified and made in accordance with the PN- EN 14960 standard

### Monthly leasing rates available
